

How Geography at Huntcliff School prepares students for life in modern Britain

We aim for our students to:

Be global citizens, and consider how the world is a place of contrasts.

Students are aware of the problems people around the face and experience. This includes living in poverty, poor quality housing and not having access to clean water, education and health care.

They are encouraged to consider the problems facing the world because of rapidly growing populations and urbanisation and be aware of the need to reduce our reliance on some resources and develop other new and sustainable ones.

Have an opportunity to learn about a range of hazards faced by the world, posed by both nature and mankind.

Students are aware of how different natural processes constantly change the earth.

They are able to develop an understanding of how new and emerging technology can improve the lives of millions of people.

Consider how the actions of people in one part of the world can have a direct impact on people in other parts of the world.

Students are encouraged to be aware of how development levels vary across the world and how this directly affects a person's quality of life.

They recognise the important role Britain plays globally, from a political, social, economic and environmental perspective.
