

# Girls in Engineering - Robot Engineering

A few weeks ago some Year 9 and Year 10 girls went to the Grimsby Institute to take part in an engineering workshop. We interviewed some of them and they explained that they had built a robot. All the girls involved really enjoyed the activities and the day.

The event was held to entice young women into the engineering world. The task was to make a programmable robot that could move any direction upon command. The girls who were involved were definitely capable of doing everything that was needed to be done.

Everyone who went to the event were split into two groups A and B. Group A consisted of the Year 10s and group B were the Year 9s. The Huntcliff teams were against five other schools which were highly competitive. The Huntcliff girls were left by themselves to create the best robot possible which was definitely a challenge, however they overcame it very easily.

YEAR 10
